FIT 5124: Advanced Topics in Security
Week 10 Tutorial Sheet

Ron Steinfeld, 9 May 2016

This week we will finish off last week's tute problems on side channel attacks, and experiment with privilege escalation attacks on vulnerable operating system Virtual Machines (VMs), as discussed in this week's guest lecture.

- Download and run a vulnerable Operating System VM as instructed by your tutor.
- Try out some of the privilege escalation techniques discussed in the lecture. Which ones work? Why / why not?
